trakr Dashboard - OMC Version: <mark>4.0.198</mark>

New Features & Improvements

Laravel Update

What it does:

trakr **Counting** has been upgraded to Laravel 11, enhancing performance, security, and access to the latest features.

Why it matters:

This update ensures that trakr **Counting** runs more efficiently and securely and keeps it up to date with the latest technology standards.

User Time Zone Management

What it does:

- Administrators can modify user time zones in the Users section.
- Logged-in users can change the time zone settings in their profile.

Why it matters:

This enhancement ensures that all users have accurate time zone settings, improving the accuracy of time-sensitive actions and data.

Inventory Management

Inventory Counting Time Zone

What it does:

Inventory counts reflect the user's time zone, ensuring accurate date and time stamping.

Why it matters:

This ensures that inventory counts are recorded correctly according to the user's local time, reducing discrepancies.

Brother Printer Settings (Only on Windows)

What it does:

A new setting allows users to print with a Brother label printer. When disabled, the printing option is hidden, restricting access to labels.

Why it matters:

This adds flexibility for users who may not use a Brother printer, streamlining the user interface by hiding unnecessary options.

Printer Label Update

What it does:

Labels have been updated to use a new combination of storage ID and product ID for scanning purposes.

Why it matters:

This improves the accuracy and efficiency of scanning operations, aligning labels with the new system.

Default Storage for New Customers (Pilot Users Only)

What it does:

Upon signup, new customers will receive a base storage tree to help them learn about the new feature.

Why it matters:

This provides a helpful starting point for new users, making setting up and managing their inventory easier.

Product Management

Product Detail Overrides (Pilot Users Only)

What it does:

Users can now override the on-hand quantity of a product directly from the product details screen.

Why it matters:
This gives users more control over inventory data, making it easier to manage product quantities accurately.

Auto Barcode Generator Fix

What it does:
Provided this setting is enabled, the auto barcode generator uses the SKU correctly when creating a new product without a barcode.

Why it matters:
This fix ensures that barcodes are generated correctly, reducing errors and improving product management.

Bulk Add to Storage (Pilot Users Only)

What it does:
Users can now bulk assign multiple products to one or more storage locations simultaneously.

Why it matters:
This feature streamlines organizing products, saving time and effort when managing extensive inventories.

Product Storage Search (Pilot Users Only)

What it does:
A new search and filter option allows users to filter products by their assigned storage locations.

Why it matters:
This enhancement improves the ability to locate and manage products based on storage location, enhancing inventory organization.

Search Enhancements

Search Functionality

What it does:

The search system has been improved to ignore dashes, quotes, and spaces when searching for product names, SKUs, and barcodes.

Why it matters:

This improvement makes it easier to find products, even with minor formatting differences in search queries.

Dashboard & UI Updates

Dashboard Statistics

What it does:

The dashboard now includes basic statistics, marking the start of new widgets to provide more insights.

Why it matters:

This is the first step towards a more informative and customizable dashboard that will help users quickly access the needed data.

Storage Selection Update (Pilot Users Only)

What it does:

The product edit screen now includes a parent storage selection system, allowing users to assign products to any level within the storage tree.

Why it matters:

This gives users more flexibility in organizing their products, making it easier to manage complex storage structures.
